PROFESSIONAL SUMMARY

Enthusiastic AI & Data Science undergraduate with hands-on experience building and deploying ML models using Python, scikit-learn, and NLP/BERT-based pipelines. Built end-to-end applications integrating Flask, SQL databases, and machine learning models across 4+ projects, including a medical report analyzer and a diabetes risk prediction system. Completed 3 internships spanning NLP, full-stack development, and applied ML. Seeking an AI/ML Engineer or Software Engineer role to apply strong DSA and OOP fundamentals to real-world problems.

EDUCATION

VSB College of Engineering **2024 – 2028**

B.Tech in Artificial Intelligence & Data Science | ***Current GPA:*** *8.37 / 10*

Sri Lathangi Vidhya Mandir

Secondary & Higher Secondary Education | HSC (12th): 80.6% | SSLC (10th): 83.4%

TECHNICAL SKILLS

Languages: Java, Python

Core cs: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOPs)

AI & Machine Learning: scikit-learn,Data Preprocessing, ML Model Development & Deployment

Data & Visualization: Power BI

Web Development: HTML, CSS, Flask

Databases: MySQL

Tools or IDES: Git, GitHub, VS Code, Eclipse, Jupyter Notebook

EXPERIENCE

- **Natural Language Processing Intern** – NXT SYNC (30 Days)
- **Full-Stack Web Developer Intern** – APPIN Technology
- **AI & ML Developer Intern** – EmGlitz Technology

PROJECTS

Mediscan-AI | Python, NLP, BERT, Flask

- Built an NLP-based application to extract and interpret clinical information from medical reports..
- Integrated BERT-based text processing with a Flask backend for automated report analysis.
- Designed the application as an end-to-end workflow from document input to structured results.

Supply Chain Delivery Risk Dashboard | Power BI, Power Query, DAX

- Built an interactive Power BI dashboard to analyze delivery performance, late-delivery risk, sales, profitability, and order trends using a real-world supply chain dataset.
- Cleaned and transformed raw supply chain data using Power Query, including data-type handling, column transformation, and preparation of analytical fields.
- Developed interactive visualizations and KPI cards to identify delivery risks, operational patterns, and business performance insights across markets, shipping modes, products, and customer segments.

Loan Eligibility Prediction | Python, Machine Learning, Pandas, Scikit-learn

- Built a machine-learning application to predict loan eligibility based on applicant and financial attributes.
- Performed data preprocessing, feature preparation, and model training to develop the prediction workflow.
- Evaluated the trained model and integrated the prediction process to classify applicants based on their eligibility.

Diabetes Prediction System | Python, Machine Learning, Pandas, Scikit-learn

- Developed a machine-learning model to predict the likelihood of diabetes using relevant patient health attributes.

- Performed data preprocessing, feature selection, model training, and evaluation on the dataset.
- Built an end-to-end prediction workflow that accepts patient inputs and generates a diabetes-risk prediction.
